## ICPC Greater NY Regional Contest

## I• Integers in Rational Bases

Given relatively prime positive integers $\boldsymbol{p}>\boldsymbol{q}$, any positive integer, $\boldsymbol{n}$, can be written uniquely as a linear combination of powers of $(\boldsymbol{p} / \boldsymbol{q})$ with coefficients in the range $\mathbf{0} \ldots(\boldsymbol{p}-\mathbf{1})$.

$$
\mathrm{n}=\mathrm{a} 0+\mathrm{a} \text { * }(\mathrm{p} / \mathrm{q})+\mathrm{a} 2 *(\mathrm{p} / \mathrm{q})^{2}+\ldots
$$

For instance,

$$
\begin{aligned}
& 15=\mathbf{2 *}(3 / 2)^{4}+1 *(3 / 2)^{3}+0 *(3 / 2)^{2}+1 *(3 / 2)+0 \\
& 15=4 *(7 / 4)^{2}+1 *(7 / 4)+\mathbf{1}
\end{aligned}
$$

Write a program to find the base ( $\mathbf{p} / \boldsymbol{q}$ ) expansion of an integer $\boldsymbol{n}$. As digits for the base ( $\mathbf{p} / \mathbf{q}$ ) expansion, use the characters $0-9$, then $\mathbf{A}-\mathbf{Z}$, then $\mathbf{a - z}$.

## Input

Input consists of a single line that contains 3 space separated decimal values. They are the numerator $p$ ( $3<=p<=62$ ) of the fractional base, followed by the decimal denominator $q$ ( 2 $<=q<=(p-1))$ of the fractional base, followed by the positive integer $n$ to be represented in base $(p / q)$. Values of $p, q$, and $n$ will be chosen so that $p$ and $q$ are relatively prime, the expansion has at most 40 digits and $n$ will fit in a 32-bit unsigned integer.

## Output

Your program should produce a single output line containing a string of digits $[0-9, A-Z, a-z]$ with the most significant digit first.

Sample 1:

| Sample Input | Sample Output |
| :--- | :--- |
| 3215 | 21010 |

Sample:

| Sample Input | Sample Output |
| :--- | :--- |
| 7415 | 411 |

Sample 3:

| Sample Input | Sample Output |
| :--- | :--- |
| 5931987654321 | V3bkX4XQVKITSN3ur6TAGF1pSFi |
